

**DEMIBLOCK
CHOPPER LUMP**

THE BARREL

MADE IN ITALY

Il demiblock viene realizzato partendo da una barra piena di diametro 80 mm che viene forata e portata a misura seguendo varie fasi di tornitura e fresatura. Si effettua quindi la saldobrasatura in forno ad atmosfera controllata che garantisce una saldatura ottimale. Il particolare accoppiamento con coda di rondine garantisce inoltre un'elevata tenuta meccanica. A richiesta possiamo elaborare ogni tipo di modifica oltre alla geometria standard.

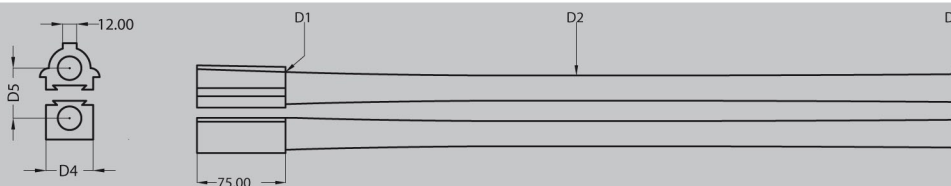

In the manufacturing of our chopper lump barrels, we start from a 80 mm diameter solid bar of steel. The bar is then drilled and brought to the correct measurement by various turning and milling operations. Then the braze welding is carried out in an atmosphere controlled furnace that guarantees an excellent soldering. The special joining guarantees also a high mechanical endurance. On request we can develop any type of modification other than the standard shape.
